(54) Title: DISPLAY FOR GAMING DEVICE

(57) Abstract: A mask is added to an LCD gaming device display to modify the appearance of content being displayed. In one embodiment, the mask comprises a dot stencil that results in a perceived increase in resolution and smoothing of curved shapes. In one embodiment, the stencils are added with layers of the LCD display to change the look of groups of tiny square pixels into the shape of large round dots. In a further embodiment, the mask comprises one or more groups of seven-segment stencils to create an illusion of a seven-segment LED display. Such displays may be used in bonus game meters.
